FOR IMMEDIATE RELEASE

Kisco Announces Two Factor Authentication Tool for IBM i

Saranac Lake, NY, June 25, 2020: **Kisco Information Systems** today announces a new release for its two factor authentication tool for the IBM i platform. **i2Pass** provides extra security protection for IBM i (Power i, iSeries, AS/400) installations. It works with 5250 terminal session connections or with customer applications using an API interface.

New with Release 2, i2Pass can control terminal session access to an IBM i system based on the IP address of the client computer. When this feature is active, terminal sessions for specific users can only be established when the source IP address is approved in advance for that user. This adds more access control for terminal sessions. Users can be enrolled individually to use this feature.

i2Pass still provides protection for your system by implementing a two factor authentication requirement for enrolled signon users and devices. The additional password, a randomly generated nine digit number, can only be used only once. After it has been used, it can never be used again for a specific user profile, the additional password is permanently retired. This method allows access the system from a remote location for a legitimate purpose, but when someone tries to use that same authentication code over again, they are denied access.

Users can be enrolled along with their email address, text address or both. When a signon is in process, the second authentication code is automatically sent to the user and then requested to complete the signon process. When a code is sent by email, it must be used within a 15 minute window. After 15 minutes, it will expire and cannot be used.

The two factor authentication can also be used from within customer applications. APIs allow customers to call the i2Pass routines to generate the second authentication factor and send it to their user along with subsequent validation of the combination of user and secondary code.

i2Pass is licensed based on the serial number where the software is installed, the partition where the software is installed and the number of user profiles enrolled. Licenses are available for up to 25 users, from 26-100 users, from 101-200 users and an unlimited user license.

The software is compatible with systems using IBM's i/OS 6.1 software release and higher, including i/OS 7.4.

Complete product information is available at www.kisco.com/i2p.

i2Pass pricing starts at \$495.00 for a single partition, 25 user license and tops out at \$1,295.00 for a unlimited users. LPAR pricing is also available that lets customers implement the software in multiple partitions on a single serial number. Kisco Information Systems offers a free 30-day evaluation of the product that can be downloaded with complete software documentation from www.kisco.com. To obtain a free evaluation on CD call Kisco at (518) 897-5002 or e-mail sales@kisco.com.
