FOR IMMEDIATE RELEASE

Kisco Adds Report Intranet Feature to WebReport/400

Saranac Lake, NY, August 3, 2011: **Kisco Information Systems** (www.kisco.com) today announced the immediate availability of version 11.05 of their WebReport/400 package.

With this release, WebReport/400 includes a built-in Report Intranet feature that allows reports to be deployed within an organization from a web browser interface. The Report Intranet is implemented using the Apache web server that is included in IBM i/OS software and does not require any additional OS components from IBM.

When implemented, access to the reports in the Report Intranet is controlled by a logon process using i/OS user profiles. Each user is classified according to the reports they are allowed access and are only shown those reports that they are allowed to view. Control for this user access can be implemented at the user profile or at the group profile level.

Reports deployed through the Report Intranet can be in any of the various popular PC report formats supported by WebReport/400. These can include Adobe Acrobat (PDF), Excel (XLS), Rich Text Format (RTF), Text (TXT) and Comma Separated Values (CSV).

The new release of WebReport/400 also includes an improved control over spool files that contain DBCS characters and improved security options for output queues accessed by WebReport/400.

WebReport/400 is an e-business utility that will convert IBM i reports to PDF, Excel or formatted text and distribute them in email or as internet/intranet content. The application offers flexible configuration and ease of use, as well as the ability to embed report distribution functionality into existing applications. Reports can be processed manually, set up to be handled automatically using monitored output queues, or embedded directly into applications using our standard IBM OS command formats.

For complete, detailed information in WebReport/400 and all its features, along with case studies, screen shots and technical support announcements, please visit www.kisco.com/webreport.

WebReport/400 PDF, is priced at \$1,995.00 for a single partition installation on the IBM i family of systems. For companies with several systems or using LPAR technology, Kisco offers multiple-license discounts. WebReport/400 is available for a free 30-day evaluation. It can be downloaded with complete software documentation in PDF format from www.kisco.com. To obtain a free evaluation on CD or by download call Kisco at (518) 897-5002 or e-mail sales@kisco.com.
